The precision of the tip

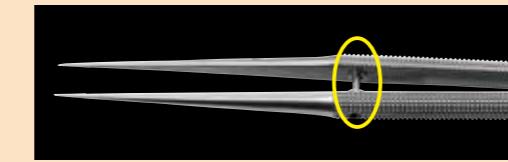

*Holding parts close horizontally and equally as surface-hold, not unequally like pint-hold. Therefore, you can surely hold delicate tissue and suture thread with this pliers.

Holding power and stability

*T/C is applied with tip part, which increases holding power of the Micro Tissue Pliers.

Comfortable control

*Stopper, attached on the handle, always keeps the ideal distance. It prevents you from excessively opening and closing the pliers.
